

Apple Mac Safari Settings

To turn off the pop-up blocker and clean out cookies and cache in Safari, go to Preferences,

select *Security* , uncheck the *Block pop-up windows*, click the *Show Cookies* button, and clean out cookies and temporary Internet files. Do this at least weekly and definitely before tests.

There is a similar window in *Applications > Utilities > Java Preferences*. In the *Java Network* settings there is a check box for *Keep Temporary Internet files for quick access*. Un-check that box, we don't want to keep temporary Internet files; delete all the temporary Internet files.
